# PP02

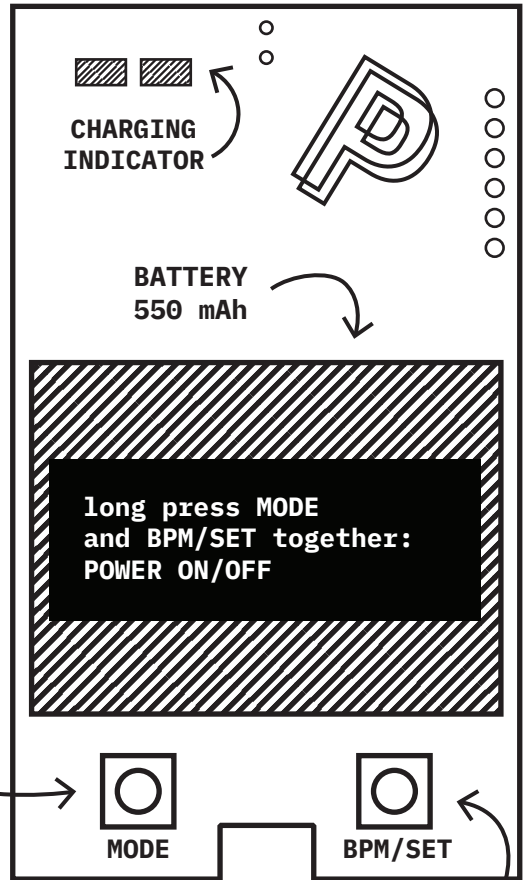

**single press:**  
**MODE SELECTION**

**long press:**  
**MENU OPEN**

**if menu opened:**  
**NEXT MENU ITEM**

**pressing to the rhythm:**  
**ANIMATION SPEED**

**if menu opened:**  
**CHANGING CURRENTLY**  
**SELECTED MENU ITEM**

**USB port:**  
**CHARGING**

## POWER ON/OFF

PP02 is turned on/off by pressing both MODE and BPM/SET buttons together. When powering on, the battery state is shown. When turning off, there is a power down animation.

## ANIMATION MODES

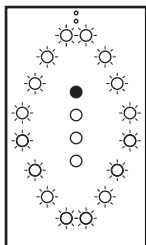

There are several animation light modes contained in Párty přítelkyně. You can change the mode by short single press of the MODE button. The colors can be changed in the menu.

## ANIMATION SPEED

The animation speed is set by pressing the BPM/SET button in the rhythm, eg. 10 times in a row. The tempo is then determined by the average time between pressings. Before setting a new speed, wait for a few seconds, or the it will be added to the previous metering.

## MENU

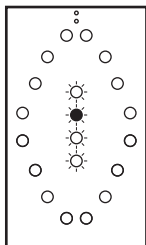

Hold the MODE button until the first of the center diodes lights on - that means the menu is opened. You can now single press the MODE button to navigate between menu items, the BPM/SET button changes currently selected menu item. The menu closes itself automatically when no button is pressed for some time.

### 1. Primary (outer) color setting

The first menu item changes the primary color of the animation using the BPM/SET button.

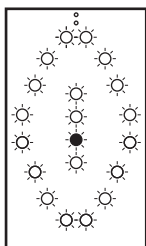

There are several colors to choose from, after white color there is a "special color", which is generated randomly each time the animation occurs.

### 2. Secondary (inner) color setting

The second menu item changes the secondary color of the animation using the BPM/SET button.

Also there is a "special color" as in the primary color setting.

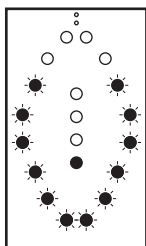

### 3. Brightness setting

There are eight brightness steps to choose from, again using BPM/SET button.

The brightness significantly affects the battery life - when in lowest setting, PP02 can light for 20 hours or more, but in full brightness the battery can last only around one hour.

Be careful, the full brightness is for advanced users only!

### 4. Battery status

The last menu item displays a rough estimate of the remaining battery capacity.

Keep in mind that is good to charge the battery before each party!

By pressing the BPM/SET button at this setting the menu is closed.

## CHARGING, BATTERY LIFE, USB PORT

PP02 can be charged using the USB port at the bottom, the whole process takes around one hour. The red diode signals charging, the green diode turns on when the battery is full. The average battery life is around 10 hours, it's affected by the chosen animation and brightness setting.

The USB port is meant for charging only, PP02 cannot be reprogrammed via it.
